CoffeeBrewCoin($BREW)

Whitepaper

Introduction

CoffeeBrewCoin ($BREW) is a memecoin with real utility powering the Coffee Scan platform — a trusted source for secure cryptocurrency listings, market narratives, and news.

We will also implement artificial intelligence to perform in-dept analyses of new cryptocurrencies, providing search results for associated projects and social media accounts linked to each token you wish to evaluate.

Access to our upcoming platform will be available at **CoffeeScan.io** following its official launch.

Vision

Our mission is to build more than just a cryptocurrency. We're crafting an ecosystem where every holder of $BREW becomes a vital voice in shaping a better crypto experience — one that celebrates transparency, rewards curiosity, and protects users from deception.

Coffee Scan, our core platform, was born from a need: the need to feel safe, informed, and supported in a world full of scams, pump- and dumps, and empty promises. We don't want to simply expose projects — we want to empower our community to understand them deeply, vote on them, discuss them, and decide together which ones deserve to be seen and which should be left behind.

With the help of artificial intelligence and human judgment, we'll map out the story behind every new token: its team, its presence on social media, its intentions, and its truth. We're not just building tools — we're building a movement for mindful investing.

Because coffee, like crypto, is better shared. And in this space, every holder matters. Whether you're a veteran trader or just someone curious about Web3, you belong here. You belong in a community that doesn't sell hype — it brews connection, learning, and trust.

Tokenomics

Total Supply: 1,000,000,000 $BREW
Fees: 0%

Use	Percentage	Tokens
Public Circulation	90%	900,000,000
Web Development	5%	50,000,000

Use of Funds

5% for Web Development: APIs, backend, wallet integration & platform integrations.
This allocation will support the technical foundation of the Coffee Scan platform, including backend architecture, external API implementation (e.g. CoinGecko, DexScreener), wallet integration (e.g. Phantom, Solflare), database security, and ongoing platform scalability and enhancements.

5% for Marketing: social media, influencers, community rewards.

Roadmap 2.0

Phase 1:

- Project concept and brand creation
- Smart contract design for $BREW
- Coffee Scan platform design
- Media handles creation (X, Telegram, TikTok, YouTube)
- Pre-listing teaser campaign launch

Phase 2:

- Launch of "Coffee + Crypto" narrative on X & TikTok
- Smart contract audit + Token minting
- Visual identity campaigns (memes, branded content)
- Security map design for Coffee Scan

Phase 3:

- Official DEX listing (Raydium)
- Add liquidity and open trading
- LP lock + roadmap transparency post

- Post-listing campaign: "Brew it. Hold it."
- Utility announcement for $BREW within Coffee Scan
- Begin CMC & CoinGecko listing applications

Phase 4:

- Launch of Coffee Scan Beta (focus on secure listings)
- Add Security Score classification (High / Medium / Low)
- Content series: "How to detect scams"
- Integrate live new crypto listings via APIs (e.g., CoinGecko)
- Newsletter opt-in for updates, reports & drops
- Interactive community polls for token ranking

Phase 5:

- Launch premium Coffee Scan tools for $BREW holders
- New section: "Narratives & Trends Radar"
- Onboarding education hub for crypto beginners
- Reward points for active community members
- $BREW Staking utility concept launch

Official Launch

To celebrate the official launch of Coffee Scan after its post-beta phase, access to the platform will be 100% free for 6 months — open to both community members and new users.

Throughout this period, we will continue rolling out improvements, refining features, and expanding functionality based on user feedback and real-world testing.

Happy trade ☕
